

Anti-Mesh Crack & Reinforcement

CSS mesh prevents cracks in flooring slabs from widening, ensuring that your slabs are proof against temperature variations in the SA climate.

Applications

Residential
Commercial
Industrial

Don't let concrete shrinkage ruin all your hard work in laying a slab – protect your slab against the effects of temperature changes. Without mesh, cracks can spread to the point that they impact on the load-bearing efficacy of your slab. Reinforced cages are cleverly integrated into our block design to eliminate vertical support

- Steel reinforcing bars and beam cages.
- Can be customised to your specifications.
- Shrinkage and temperature reinforcement.
- Ideal for non-structural slabs

Service is not our only strength.
